

How to develop the Hungarian Research and Innovation Agenda?

- *The bioeconomy is happening today*
- *Research should help in the governance and the political economy of the bioeconomy (not enough the market and technology)*
 - *Rethinking the role of primary production sectors, interlinked policies, and also the administrative structures.(Foresight)*
 - *First strategy and then investment (linking the EU Funds)*
 - *The Success in HORIZON2020 should meant success in applications of the research by solving local, regional, global challenges. (SC2)*
 - *The research and innovation agenda, education and advisory systems needs to be rethink based on the future challenges (EIP)*
 - *SCAR type discussion at national level and EC level*
 - *Common Agricultural Research Policy is not the same with the Common Agricultural Policy (need for ministry level involvement)*
